Q: PHP file upload: file is not uploaded to the server (probably due to permissions) I'm having a weird problem with php: I'm trying to upload a file to the server and a DB table, but I am getting the following error: upload failed: The file is too large in /Users/skender/Sites/upload.php The problem is the size of the file. I have the value set to 100 MB. The upload_max_size is set to 2097151. As of now, I don't see a way of changing that in my php.ini file. I checked the owner of the folder and the group of the folder, they are all the same. I checked the permissions of the directory and the file. They are 0755. I tried to run php from the terminal and it says that the size of the file is 1.2 GB. I checked the values for the maximum size and the upload_max_filesize in /etc/php5/cli/php.ini. Also, when I run a file upload I receive a different error: Warning: mysqli_query(): Couldn't fetch mysqli in /Users/skender/Sites/upload.php on line 7 What could be the cause of this weird problem? Thank you. A: To upload large files in php file_upload function (and other functions from the same class) have a maximum value of 2147483647 by default (if I remember correctly). So, you will need to change the php.ini value. Source: You could use this in your php.ini upload_max_filesize = 20M post_max_size = 20M 4 Best British Motorcycle Hotels Welcome to Motel.com's roundup of the best motorcycle hotels in the UK. This application is based on Patent Application No. 10-337910 filed in Japan, the contents of which are hereby incorporated by reference. 1. Field of the Invention The present invention relates to a motor to be mounted on a door of a vehicle and a motor assembling apparatus for assembling the motor, and more specifically to a motor to be mounted on a door of a vehicle and a motor assembling apparatus for assembling the motor. 2. Description of the Related Art FIG. 1 shows a motor (hereafter referred to as xe2x80x9cmotor 70xe2x80x9d) to be mounted on a door of a vehicle and a door assembling apparatus for assembling the motor, as disclosed in Japanese Unexamined Patent Publication No. 6-313802. The motor 70 includes a stator

70a having a shaft 70b fitted therein and a housing 70c fixed to the shaft 70b. A rotor 70d is rotatably accommodated in the housing 70c of the stator 70a. The stator 70a and rotor 70d together form a stator and a rotor of the motor 70. When the motor 70 is mounted on the door, the stator 70a is first fitted into a bracket 72a, to be fixed to the door. In addition, the bracket 72a is fixed to the door by a fixing portion 72b. In the fixing portion 72b, a bolt 76b is inserted into a bolt insertion hole formed in the bracket 72a and a washer 77 is fitted around an outer peripheral face of the shaft 70b. A nut 78 is threaded onto the bolt 76b. The nut 78 is tightened against the washer 77, so as to fix the bracket 72a and shaft 70b to the door. The bracket 72a, shaft 70b, nut 78 and washer 77 are integrally assembled. With the bolt 76b inserted into the bolt insertion hole formed in the bracket 72a, an outer diameter of the bolt 76b is slightly smaller than an inner diameter of the bolt insertion hole. Thus, the nut 78, washer 77 and bolt 76b are not disengaged from each other while being threadedly engaged with each other. However, the bolt 76b must be first fitted into the bolt insertion hole of the bracket 72a and then the nut 78, washer 77 and bolt 76b are assembled together. Thus, to assemble the nut 78, washer 77 and bolt 76b
